Video Player

• • •

With React

Let's rethink what is a video player

What is video player?

A `<video />` controlled by a bunch of `<button />`, right?

And when we click on a button, we play with an `event()`

A new API

So all you need is an **API** controlling the video.
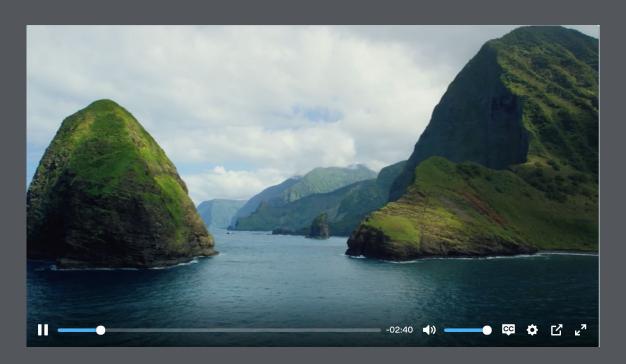

Great news! It exists!

https://developer.mozilla.org/en-US/docs/Learn/JavaScript/Client-side_web_APIs/Video_and_audio_APIs

An example?

https://plyr.io

Your job

Create a video player:

- Using React
- With cool icons (https://fontawesome.com/, https://freeicons.io/, https://www.iconfinder.com/…)
- Hosted online
- With a page of presentation
